

CLEAN VERSION OF ABSTRACT

A combined curtain rod and shade assembly having two opposing corners attached to sheet rock with studs and a window having a pair of conforming and opposing virtually 90 degree angled members for meeting the corner between the window and the frame, in which, on the side of each, is presented a coupling device for acceptance of a rod for a shade assembly, on the 90 degree recess a coupling device for enabling at least one curtain rod assembly for hookable assemblage such that the distance traversed between the two member portions is effectively the width of the window; and an adhesive material on the rear portion of each of said angled member portions. The curtain rod and shade assembly further having a multiplicity of screw holes and screws of such length sufficient to enable passage through the sheet rock and into the studs.
